Portfolio: https://scroll-portfolio-eta.vercel.app/

STUDENT PROFILE

Second-year MEng Computer Science (Artificial Intelligence) student at the University of Southampton, with industry experience in system test and hardware bring-up from a summer internship at AccelerComm. Builds AI-powered products at hackathons and on the side, with a focus on keeping critical logic deterministic and testable while using LLMs where they add value. Comfortable across Python backends, Next.js frontends, ML models and Linux environments.

TECHNICAL SKILLS

- **Software Development:** Proficient in Python and Java, with working experience in TypeScript; experienced in architectural design, debugging and automated testing.
- **Backend & Web:** FastAPI, Next.js, PostgreSQL, SQLite, JavaFX; deployment on Vercel and IBM LinuxONE; UI/UX design in Figma.
- **AI & Machine Learning:** scikit-learn (gradient boosting); agentic systems with Strands Agents and Amazon Bedrock.
- **Systems & Test:** Unix/Linux, embedded Linux bring-up (firmware, bootloader, kernel, drivers), instrument control with PyVISA and SCPI, 3GPP standards.
- **Languages:** English (IELTS 7.5), Hindi, French.

PROFESSIONAL EXPERIENCE

AccelerComm — System Test Intern Jul 2026 – Sep 2026

- Controlled Keysight test equipment (MXA signal analyser, EXG vector signal generator, S46 microwave switch system) from Python using PyVISA and SCPI, with signals configured in Keysight Signal Studio and tested against 3GPP standards.
- Built an NXP LX2160 device under test from scratch, covering hardware setup and full software bring-up (firmware, bootloader and kernel configuration, drivers, networking); it is now in use as a spare DUT for the team.
- Installed and configured Ubuntu on test machines, and got an unfamiliar Keysight instrument running for the team independently, with no existing playbook.

Web Developer & Designer (Freelance) Aug 2024 – Jun 2026

- Delivered two custom web development projects, managing the end-to-end design and deployment process to meet specific client requirements.

LetUsBloom — Head of Technology Aug 2024 – Mar 2025

- Managed the organisation's website architecture, ensuring usability and structural integrity across digital initiatives.

Subway — Team Member, Southampton Oct 2025 – Dec 2025

PROJECTS & HACKATHONS

Payment Shield — IBM Z Datathon 2026 Oct 2026

Team Databaes (6 people)

- Built real-time detection of authorised push payment (APP) scams, combining a gradient boosting model (scikit-learn) with explainable rules so every flag can be justified.
- Achieved 97.0% recall and 92.4% precision with sub-millisecond scoring per transaction; served with FastAPI on IBM LinuxONE (s390x), with a SQLite audit log of every decision.

ForexMatch — Side project Sep 2026

github.com/shlokpanjabi/forexmatch | forexmatch.vercel.app

- AI agent that recommends forex cards to Indian students studying abroad, built for the Agents for Humans hackathon.
- A deterministic Python engine does all fee costing and ranking across 16 cards from 7 providers, while the LLM only handles conversation, so fees and ranking never depend on model output. Cards with unknown fees are ranked at worst case.
- Built with Strands Agents, Amazon Bedrock, FastAPI, PostgreSQL and Next.js/TypeScript, backed by 170+ backend tests.

LaunchPilot — HackOnVibe (online, team event) Aug 2026

launchpilot-ten.vercel.app

- AI marketing agent: paste an App Store or Google Play link and it analyses the app's positioning, target audience, SWOT and user reviews.
- Generates a full multichannel launch campaign (Discord post, email, social copy, landing page, QR code) with one-click launch and click analytics, built on a Next.js frontend.

VOLUNTEERING

SOTSEF Science & Engineering Family Day — Technical Volunteer Mar 2026

- Ran technical demonstrations and supervised electronics construction workshops for around 5,000 visitors.

EDUCATION

University of Southampton — MEng Computer Science (with Artificial Intelligence) Sep 2025 – Present

- Modules: Algorithmics, Data Management, Computer Systems, Networks & Security, Programming I & II, Applied Mathematics I & II.

ONCAMPUS Southampton — Foundation Programme: Maths (A*), Physics (A*), Skills for Science (A*) Sep 2024 – May 2025
